

Egress eDiscovery and Analytics

Secure email reporting and analytics for meeting regulatory requirements, maintaining business continuity and preventing data breaches.

With increasing pressure placed on organizations to maintain compliance with data protection and retention legislation, as well as preserve business continuity, organizations need a secure way to effectively store and access all email content. Egress eDiscovery and Analytics offers the ability to index, archive and instantly search plaintext and encrypted email content. Organizations can then understand and analyze their data, quickly perform internal investigations such as subject access requests (SARs) and meet compliance requirements including for GDPR and HIPAA, etc.

Advanced discovery and compliance reporting

With regulations requiring efficient fulfilment of data requests, eDiscovery and Analytics provides search templates for accelerated report generation when compiling a data subject's information. As well as the ability to search across encrypted emails and files, intelligent optical character recognition technology makes keyword searches within images and scanned documents possible. A redaction tool can then obscure non-relevant sensitive data prior to sending the report to the data subject.

Integration with Egress Email and Document Classification enables reporting on document classification across an organization. This includes automated document similarity reports and the ability to track classified data, including when documents have been edited, renamed or had a classification downgrade.

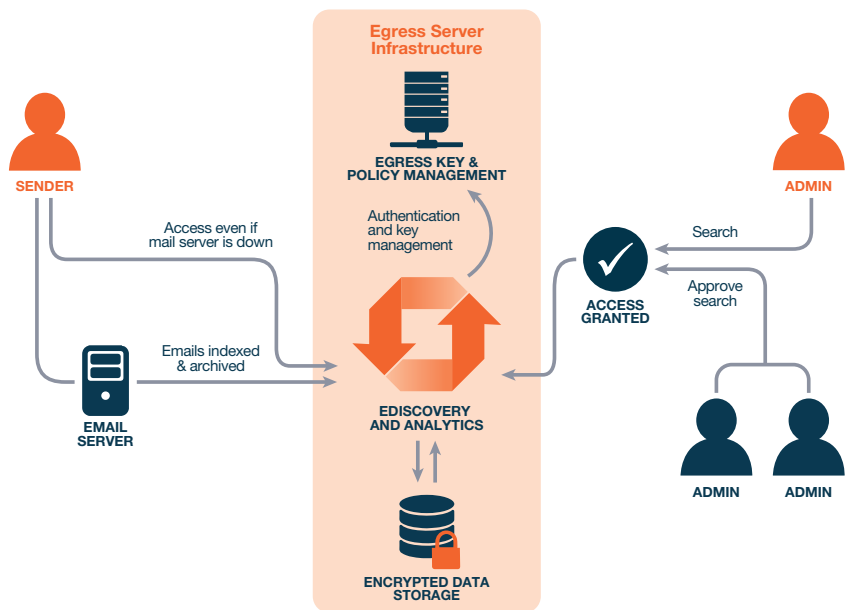

Benefits

- ✓ Gain a deeper understanding of organizational email data
- ✓ Meet legislative and industry compliance requirements, including for GDPR and HIPAA, etc.
- ✓ Respond to information requests and subject access requests quickly and easily
- ✓ Maintain business continuity with complete email archive, download and reply functionality
- ✓ Monitor usage of email security solutions and improve uptake
- ✓ Secure personally identifiable and commercially sensitive data but provide easy access for authorized users
- ✓ Audit and report on document classification events, plus location changes, document edits and filename changes
- ✓ Apply additional layers of protection using multi-factor authentication
- ✓ Adopt an email encryption solution without compromising archiving functionality

Integrated access to personal archives with fast, comprehensive search

eDiscovery and Analytics enhances staff productivity with access to encrypted and plaintext email from a single location through a simple user interface, via the web browser or from within Outlook. Users can explore their personal archives while administrators can monitor the entire email archive, using search parameters and options to search inside attachments, as well as the email body and subject lines. Reporting provides in-depth analysis of how employees are securing sensitive data, allowing targeted improvements to be made to organizational data security processes. The powerful analytics engine also provides real-time, detailed information for drilled-down monitoring and investigations.

Flexible infrastructure for bespoke archiving and data protection

The complexity of an organization's infrastructure can often be a barrier to effective archiving and security solutions, which is why eDiscovery and Analytics is platform and provider agnostic with full cloud, on-premise and hybrid implementations available, including US-only data centers for hosting. Implementation is completely flexible, with the option to automatically store highly sensitive email content on-premise while benefitting from cloud storage for non-sensitive data, including Microsoft Azure Blob storage. eDiscovery and Analytics also integrates into Outlook, helping users access their personal archives directly from their desktop. Automated system triggers and report generation further aides customization and integration.

Complementary products

- Egress Email Encryption
- Egress Email and Document Classification
- Egress Risk-based Protection

"We decided to use Egress eDiscovery and Analytics to help monitor and manage our compliance with both data protection law and industry best practice."

HEALTHCARE RM

Highlighted features

- ✓ Index and store encrypted and plaintext email content
- ✓ Rapid search and access of archived emails and attachments
- ✓ Search templates for fast responses to data requests
- ✓ Redaction of non-pertinent data when fulfilling data requests
- ✓ AES-256 bit encryption encrypts all content at rest and in transit
- ✓ Character recognition for search within images and scanned files
- ✓ Classification auditing for document tracking and searches based on file similarity
- ✓ Can be deployed on-premise, fully hosted or in a hybrid system
- ✓ Choice of hosting and location, including MS Azure Blob and AWS
- ✓ Full auditing and reporting of all system and user interactions
- ✓ Fast import of historic email data and existing PST files
- ✓ Discovery for exportable analytics
- ✓ Restrictions on data searching
- ✓ Multi-factor authentication available via SMS and QR code
