

How to send secure emails in G Suite as an online Egress Customer

Egress integrates with G Suite to provide in-browser email encryption and protection against misaddressed emails.

Stage one: Download and sign in to the Egress Chrome add-in

Egress Secure Email and File Transfer subscribers can download the free Egress Chrome Add-in [here](#). After adding the extension to your Chrome browser, it will appear in the top right-hand corner of the browser window.

1. Select the extension icon to log in to your Egress account.

Stage two: Sending a secure message

The Egress Chrome extension adds an email encryption option to the New Message window.

1. Sign into your G Suite account and go to your Gmail inbox, checking that you are signed into your Egress account in the Chrome extension.
2. Press **Compose** to start writing a new email.
3. Add recipients and a subject line then compose the email as normal.
4. Press the Egress message security icon and encrypt the message and attachment by selecting **Encrypt**.
5. Press **Send** to send the email securely.

Stage three: Managing access to secure messages

After sending a secure message, you can manage access to that message and view audit logs concerning recipient behaviour.

1. Select the **Egress Chrome extension icon** in the browser toolbar.
2. Choose **Manage Egress Account**.
3. In the **Administration Panel** that opens, choose **Sent Packages**.

4. Select the secure message you wish to view options and reporting for.

5. The package properties window opens, with tabs that contain different options:

- In the **Details** tab, use the **Status** drop-down menu to revoke access to the secure message, then press **Save Changes** to confirm the revocation. Recipients will no longer be able to access the contents of the secure message.
- Use the **Package Contents** tab to view details of any attachments.
- The **Delivery Reports** tab shows timestamped confirmations of secure message delivery.
- Select the **Audit Events** tab to view a comprehensive list of recipient actions, including when they opened the secure message and whether they attempted to forward the message to someone else.

Learn more about Egress

Visit www.egress.com/online-tutorials for video tutorials on using Secure Email and File Transfer, including how to:

- Access a secure message
- Manage your messages and control access to them in real time
- Send large files securely
- Approve or deny access requests to secure messages
