

# Egress Secure Web Form

Protecting the flow of sensitive data into an organization by helping third parties securely and efficiently **share large files and personal information.**

Third parties regularly need a single point of contact to share sensitive information, including large files, with organizations. Proof of identity, evidence and official documents all need to be shared securely, and organizations need to audit and control this data intake in order to manage risk and uphold data privacy. Egress Secure Web Form provides bespoke web-based forms that allow third parties to easily fill out their details, upload files and send them to the organization in an encrypted format.

The screenshot shows a web browser window displaying the Egress Secure Form. The form has a header with the Egress logo and the title 'Egress Secure Form'. Below the header, there is a section for 'About your enquiry' with a 'Name \*' and 'Email \*' field. Below this is a section for 'Select some files' with a 'File Upload' button. The form is designed to be user-friendly and secure.

## Secure information sharing made simple

Content and form details uploaded via Secure Web Form are encrypted in transit and at rest, irrespective of the storage destination. File types can be restricted and additional user verification put in place in order to further protect and control the data being received. Attachments are also scanned for viruses when submitted, to protect the corporate network. Complete auditing and reporting, with notification options, means administrators can closely monitor the user activity and uploads taking place.

## Benefits

- ✓ Enhance efficiency and cost saving by reducing the time taken to share data
- ✓ Make it easy for third parties to submit sensitive data securely
- ✓ Upload to existing workflows to reduce administrative overheads
- ✓ Prevent data loss and protect sensitive content
- ✓ AV scanning ensures no malicious files will reach your network
- ✓ Meet legislative and industry compliance requirements
- ✓ Free for third parties to transfer sensitive data, with no account sign up required
- ✓ Provide a branded, customizable area on a corporate website for trustworthy and secure data transfers
- ✓ Integrate data security strategy into existing processes for joined-up management and control

## Customizable forms with flexible hosting options

The secure forms are fully customizable, with the ability to brand according to corporate guidelines and also choose which data fields are included. It's also possible to restrict the data types that can be uploaded. Organizations can choose where to host both the web forms and the files that are shared securely by third parties, with one option being integration with Egress Secure Workspace for easy online file storage and management.

“All submissions can be tracked and audited, and confirmation receipts can be generated so that the user supplying the information can be confident that it has been received.”

STRATEGY DIRECTOR FOR YOUNG PEOPLE'S EDUCATION AND SKILLS, LONDON COUNCILS

## Highlighted features

- ✓ Encrypt data in transit and at rest using AES-256 bit encryption as it is transferred from senders to your organization
- ✓ Full auditing and reporting for tracking data entering your organization
- ✓ Integrates with Egress Secure Workspace to provide secure file storage and sharing
- ✓ Additional security measures include third party verification
- ✓ Customize branding and form fields, and restrict file types
- ✓ Flexible and secure web hosting options, enabling choice of hosting provider and data location
- ✓ Integrate with anti-virus solutions for network edge security

## Easy transfer of sensitive data into organizations

Secure Web Form is user-friendly and free for third parties to use, reducing the time taken to share sensitive files. The secure forms are also accessible via mobile for remote access and upload, and no sign up is required. Administrators benefit from tools to easily organize the files they receive in their secure storage location, while automation provides further efficiency and cost savings for the file upload and management process.
