

SUPREME COURT

The Sunshine Laws, Freedom of Information and compliance

Use Egress to **minimize response time** to information requests and avoid a costly violation.

The Sunshine Laws in Florida, Ohio and Vermont are examples of Freedom of Information Acts, intended to create greater transparency in government by affording their citizens the right to access official documents, meeting records, and communications (including electronic). All public records produced therefore remain available for scrutiny by the public.

Not only does the resulting flood of information requests cripple productivity as already limited civic resources stretch beyond their threshold, but any failure to provide records also provokes the cost of fines and litigation, not to mention huge embarrassment for agencies and individuals.

Eliminate the risk of non-compliance

Stay on the right side of government legislation

Avoid unnecessary litigation costs

Protect limited budgets by avoiding legal battles

Boost workflow productivity

Minimize time spent on responding to information requests

Uphold your reputation

Keep voters onside by demonstrating transparency, reliability, and trust

Eliminating time spent on information requests

Local governments receive thousands of requests from citizens every year to access public email records, piling pressure on their limited resources to provide timely responses that often each contain dozens of pages of data, all while the threat of an unwanted and costly lawsuit looms. **Egress Investigate** offers rapid and powerful search functionality so that administrators can search across millions of both plain-text and Egress-encrypted email records in seconds. Administrators can then quickly and easily export reports directly to PDF to then share with citizens, keeping constituents happy and attorneys at bay.

Automated redaction to fast-track the process

While manually searching through years of email records is inefficient enough, taking steps to redact non-pertinent sensitive data not only adds significant time to the process but also heightens the risk of a security breach by mistakenly exposing non-relevant personally identifiable information in a response. Egress Investigate automates the redaction process, enabling administrators to rapidly search, find, and conceal specific phrases in minutes. They can then download all records to their device for quick and efficient reporting that saves countless employee hours and keeps sensitive data safe.

"The best thing I like about Egress is the simplicity and the ease of access for users."

EGRESS CUSTOMER REVIEW VIA G2 CROWD

A wider intelligent email security platform

Egress Investigate is part of our Intelligent Email Security platform that stops email data breaches, secures sensitive email content, and measures the risk of a security breach.

In addition to Egress Investigate, **Egress Prevent** stops employees sending emails to the wrong recipient or with the wrong content by using contextual machine learning that deeply understands user email patterns and spots abnormal behaviour. **Egress Protect** then allows users to easily apply the appropriate level of encryption to emails and attachments in order to keep sensitive data safe in transit and at rest.

Top five features

- 1 Rapid and comprehensive search
- 2 Plain-text and Egress-encrypted coverage
- 3 Automated redaction
- 4 Exportable analytics
- 5 Full audit trail
