

# Egress Protect on mobile

Enable users to easily encrypt emails with our **secure email mobile app**.

The way in which we communicate has changed dramatically. Workforces have become increasingly remote, while digital connectivity has spawned a 24/7/365 culture where employees work around the clock to get everything done. Productivity may be the beneficiary, but the risk of sensitive data slipping through the net only increases as fatigue sets in on rushed workers striving to meet their latest deadlines.

The Egress secure email mobile app helps on-the-go employees stay productive and, importantly, guard against data breaches with easy to use, certified encryption.

## Easily encrypt mobile emails

Our dedicated secure mobile app is much more than a static email reader. Full send and receive capabilities make it quick and easy for users to not only read but also respond to Egress-encrypted emails directly within the app. And with just a couple of taps, users can protect their emails with the right classification without security getting in the way. That way, you can safeguard against data breaches caused by human activated risk.

## Key benefits

- Guards against data breaches by reducing human activated risk
- End-to-end encryption protects emails that are intercepted in transit
- Maintains user productivity with full mobile device support
- Engages employees to keep email data safe with an easy-to-use UI
- Allows users to stay in control with audit logs and message restrictions

Egress exceeded our expectations and met all of our business requirements as sending an encrypted email was as simple as sending a normal email.

Greg Taylor, Head of IT, Ward Hadaway

## Engage employees to keep emails safe

When email protection solutions are complex, users look for workarounds and all that does is put sensitive data at greater risk of exposure. Our simple and secure mobile solution provides an easy-to-use interface that completely removes hassle from the user experience, meaning employees engage with the app and protect emails wherever they are. The app also replicates all folders from your desktop Outlook to protect workflows and maintain user productivity.

### Key features

- Certified encryption
- End-to-end encryption in transit and at rest
- Easy to use, complete with full send and receive functionality
- Runs on both iOS and Android platforms
- Post-send controls within the app, including message revocation

## Empower users to control sent packages from the app

Just like with Egress Protect on desktop, the secure email mobile app allows users to manage and control their sent items after they have left the outbox. They can track where recipients have viewed an email and even fully revoke access within the app so that, should a colleague or third party suddenly no longer have the authority to view certain content, they can immediately block them from reading the message. This gives users complete security when protecting sensitive data.

### About Egress

Our mission is to eliminate the most complex cybersecurity challenge every organization faces: insider risk. We understand that people get hacked, make mistakes, and break the rules. To prevent these human-activated breaches, we have built the only Human Layer Security platform that defends against inbound and outbound threats. Used by the world's biggest brands, Egress is private equity backed and has offices in London, New York, and Boston.
