# Egress Intelligent Email Security

The only email security platform that **stops both inbound and outbound risks**.

People get hacked, they make mistakes, and they break the rules. Human-activated risks are surging, putting sensitive email data at risk and, ultimately, harming reputations and revenues. Legacy technologies and approaches cannot keep pace, relying on rules-based approaches that either cannot detect today's sophisticated attacks or fail to cater for the complexities of human error.

Our Intelligent Email Security platform uses machine learning technologies and applies them to the human layer in order to mitigate the risk of a potentially costly email security incident.

Stop targeted email attacks
Detect the most sophisticated attacks that slip through SEGs.

Keep data safe
Secure email flows with easy and appropriate encryption.

Avoid email security incidents
Send the right sensitive emails to the right recipients.

Protect reputations and revenues
Transform security into a competitive advantage.

Delivering end-to-end email security

Our Intelligent Email Security platform uses a combination of zero-trust models, linguistic analysis and machine learning to detect targeted phishing attacks, prevent outbound email data breaches, and dynamically apply the right level of security to every email. Our platform has three key modules:

- **Egress Defend** for stopping today's most sophisticated inbound email threats
- **Egress Prevent** for sending the right sensitive email content to the right people
- **Egress Protect** for securing email content with the appropriate level of encryption

Securing 1,000+ large organisations

Empowering users with real-time learning and usability

Unlike traditional, network edge solutions, we wrap disruptive technologies around people to spot and flag email security risks in real-time, such as email spoof attacks, compromised accounts, or even a wrong sensitive attachment in an outgoing email.

The technology clearly and simply explains why there might be a concern so that employees can actively learn in the moment and identify future security incidents themselves, ultimately serving as a first line of defence for your organisation.

"The response to Egress has been hugely positive. When we first went live, we heard water-cooler conversations where people said how much value it was already adding, particularly with regards to determining correct email recipients."

PHIL RUELLE, CHIEF DIGITAL OFFICER, BDO JERSEY

Top five features

1 Linguistic analysis

2 Machine learning

3 Zero-trust models

4 Full mobile support

5 Detailed analytics and reporting

Visit **www.egress.com** for more features.

## Detailed analytics that uncover risks and prove ROI

Our comprehensive, in-built reporting capabilities enable SOCs and Administrators to dig into what's driving risk across both inbound and outbound email flows, cutting through the noise and giving the intelligence they need to proactively identify key sources of risk faster, target training where it's needed, and respond with remediating action.

The analytics also highlight the number and types of breaches stopped, meaning you can demonstrate gains across your email security posture and prove ROI.

About Egress

Our mission is to eliminate the most complex cybersecurity challenge every organisation faces: insider risk. We understand that people get hacked, make mistakes, and break the rules. To prevent these human-activated breaches, we have built the only Human Layer Security platform that defends against inbound and outbound threats.

Used by the world's biggest brands, Egress is private equity backed and has offices in London, New York, and Boston.
