egress

Egress Investigate

Analyze and measure the risk of sharing sensitive data via email.

Organizations are under pressure to meet the requirements of a global wave of strict data privacy regulations. The likes of CCPA, GDPR and PDPA – and the financial penalties they threaten for non-compliance – give companies no option but to store and access email content securely.

Our eDiscovery solution gives you the ability to index, archive and instantly search plaintext and encrypted email content, meaning you can quickly analyze data flows and measure risk to:

Meet regulatory requirements
Detect risk to personal data and comply with emerging global data privacy laws.

Avoid financial and reputational damage
Prevent email data breaches that need to be reported to regulators and data subjects.

Fast-track DSAR response time
Streamline responses with automated and intelligent eDiscovery tools.

Keep sensitive data safe
Protect personal information with a fine-grained view of sensitive data flows.

Accelerated discovery and compliance reporting

We provide rapid search capabilities across encrypted and plaintext emails and files to help you accelerate the fulfillment of data access requests in line with new regulatory response times. Our intelligent optical character recognition technology supports keyword searches within images and scanned documents, and our redaction capabilities obscure non-relevant information.

To help keep data safe, we also report on email and document clasification across your organization, including automated document similarity reports. You can also track classified data, including when documents have been edited, renamed or had a classification downgrade.

large organizations

Integrated access to personal archives with fast, comprehensive search

We enhance productivity by providing access to encrypted and plaintext emails from a single location, via a web browser or Outlook. Users can access their personal archives, while administrators can monitor the entire email network using rapid search and inspection of email body and attachments, and subject lines. Reporting provides in-depth analysis of how employees are securing sensitive data, allowing for targeted improvements to reduce risk. Our powerful analytics engine also provides real-time, detailed information for drilled-down monitoring and investigations.

"We decided to use Egress Investigate to help monitor and manage our compliance with both data protection law and industry best practice."
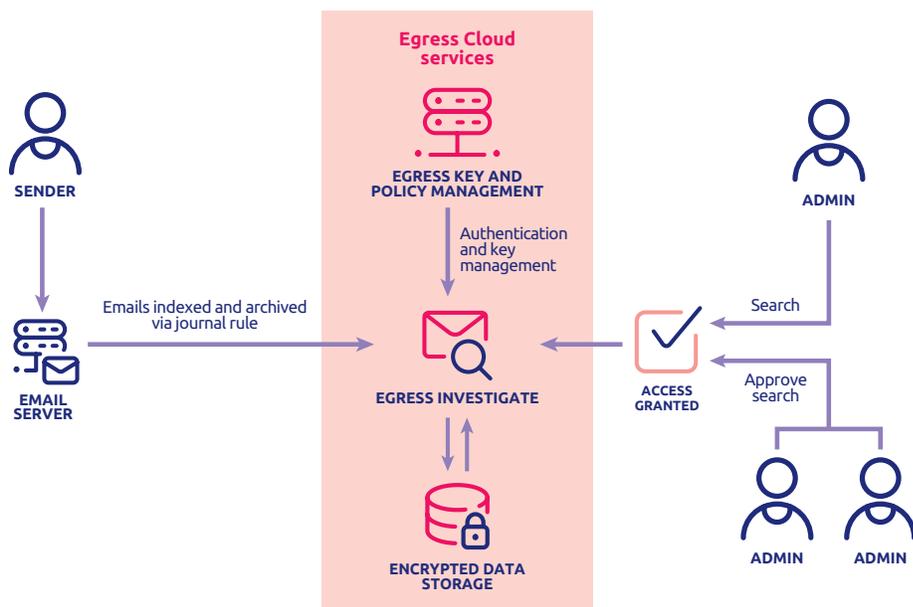

GENERAL MANAGER, HEALTHCARE RM

Top features

1 Rapid search functionality

2 Encrypted and plaintext index

3 Redaction capabilities

4 Data search restrictions

5 Character recognition

Flexible infrastructure for bespoke archiving and data protection

Infrastructural complexity can often block effective archiving efforts. We are platform and provider-agnostic, with full cloud, on-premise and hybrid implementations available. We are highly flexible, including automatic storage of highly sensitive email content on-premise while providing cloud storage for non-sensitive data. We also integrate with Outlook so users can access their personal archives directly from their desktop, with automated system triggers and report generation to further aid customization and integration.
