

Egress for banks and credit unions

Human layer security that allows you to securely ingest, manage, and share customer data.

Every day, employees at banks and credit unions receive, handle and share sensitive client content. Regulations and security policy mandate protection of this data from unauthorized access, including when in transit and at rest, while reputational pressures mean that any leak will cost you customers.

Our Human Layer Security platform uses state-of-the-art encryption and machine learning so that organizations can securely ingest client data, send the right sensitive emails to the right recipients, and apply appropriate security to keep email data safe.

✓ **Stop costly security breaches**
Email the right sensitive information to the right recipient(s).

✓ **Meet regulatory requirements**
Protect data to stay on the right side of data privacy laws and policies.

✓ **Keep sensitive data safe**
Securely ingest and manage customer data within an encrypted environment.

✓ **Avoid reputational harm**
Make security a USP in the eyes of your customers and members.

Delivering end-to-end email security

Our Intelligent Email Security platform uses a combination of linguistic analysis, machine learning, and government-accredited encryption to detect sophisticated phishing attacks, prevent data breaches, and appropriately secure email communications with members. Our platform has three key modules:

- **Egress Defend** for stopping sophisticated phishing attacks
- **Egress Prevent** for emailing the right sensitive content to the right people
- **Egress Protect** for effectively securing email content, including large files

organizations

Securely ingest and manage customer data

Our platform allows banks and credit unions to secure inbound digital data flows and then store that information safely within an encrypted file sharing environment, perfect for ingesting and managing sensitive content around members' accounts, mortgages, and loan applications.

With **Secure Web Form**, our encrypted online forms enable your customers to easily and securely share data with you, while **Secure Workspace** then gives you a safe environment to store, control and share that information, meaning you can collaborate with customers to quickly fulfil obligations.

"We selected Egress to dynamically enforce our DLP policy as employees use email, preventing unauthorized access."

HEAD OF INFORMATION GOVERNANCE AND SECURITY, GLOBAL BANK

Security technology that's easy for employees and members to use

Our technology ensures that security doesn't come at the expense of usability. With machine learning algorithms that learn user behaviour, employees can spot wrong recipients and attachments in real-time without changing the way they work. One-click access then removes frustrating barriers by giving members seamless access to encrypted email content without needing to login to a secure portal. In addition, our mobile-friendly web forms are completely customisable and flexible to your needs, making it easier for customers to reliably share data with you.

Top five features

- 1 Machine learning
- 2 Message-level encryption
- 3 Secure data ingestion and storage
- 4 Seamless recipient authentication
- 5 Full mobile support
