

# Egress Email Security Gateway (Lite)

Automatically decrypt and securely respond to sensitive government emails.

Central and local government agencies in the UK are increasingly deploying Egress to protect emails sent with sensitive data, in turn securing confidential information and preventing a costly and damaging data breach. In the past few years, hundreds of millions of emails sent within the UK public sector have been Egress-encrypted, meaning the UK government's reliance on Egress encryption is at an all-time high.

Our Email Security Gateway (Lite) removes layers from accessing sensitive email content, meaning your business can:

 **Fast-track access to data**  
Accelerate recipient access to critical information with automated decryption.

 **Boost business efficiency**  
Minimise workflow disruption with seamless, clear-text access to encrypted emails.

 **Comply with data privacy laws**  
Prevent violations of strict regulations such as GDPR, CCPA, and PDPA.

 **Avoid financial and reputational loss**  
Stay clear of heavy fines from regulators by appropriately securing sensitive data.

## Are you ready for an explosion of encrypted NHS emails?

Following a new partnership with the NHS as of early 2020, all emails sent from the NHSmail domain will be Egress-encrypted, meaning that the estimated 5.5 billion emails sent from NHSmail every month (source: NHS, July 2019) will arrive protected in recipients' inboxes. This will place huge amounts of pressure on workflows and disrupt productivity as recipients face up to the task of dedicating hours per week to manually decrypting confidential data from a critical government partner. And when the sensitive information is potentially life-saving, gaining rapid access is critical.

organisations

## Breaking down barriers to encrypted emails

Recipients of Egress encrypted messages who don't have Egress software installed can use a simple and intuitive web browser-based interface to read and reply to messages. However, with the expected surge in Egress deployment across the UK public sector, the Egress Email Security Gateway (Lite) will enhance the experience for employees by automatically decrypting Egress encrypted messages at your network edge, minimising disruption to user workflows even further.

**"Egress meets all of our needs, is very secure and easy for our users to understand."**

CUSTOMER REVIEW VIA G2 CROWD

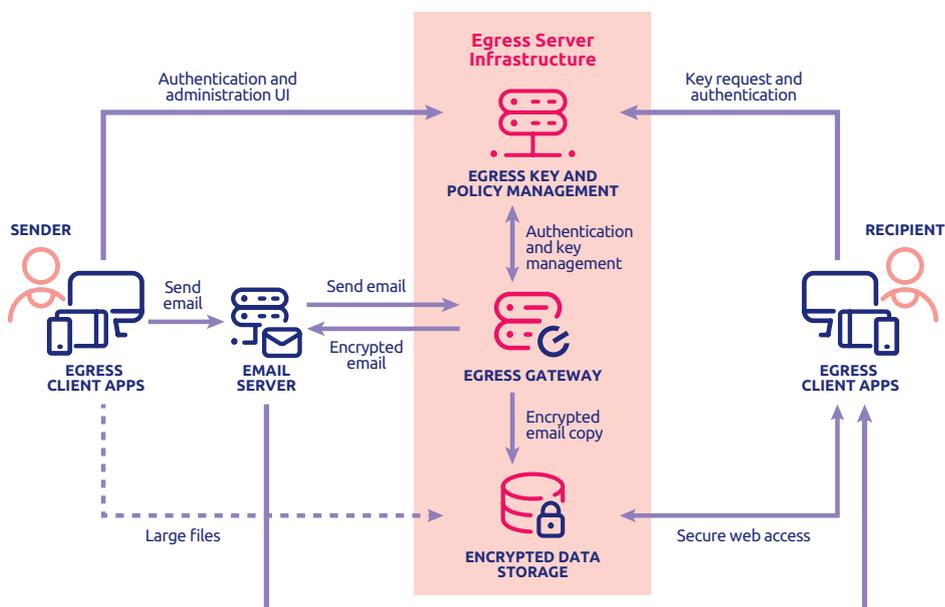

## Top five features

- 1 Seamless decryption of Egress-protected emails
- 2 Automated encryption of responses to Egress messages
- 3 Individual and shared mailbox decryption capabilities
- 4 Integration with Microsoft Office 365
- 5 Data security at rest or in transit using AES-256 bit

Visit [www.egress.com](http://www.egress.com) for more features.

## Enhanced user experience

The Egress Email Security Gateway (Lite) seamlessly integrates with your existing email infrastructure, including Microsoft Office 365 or on-premise Microsoft Exchange by decrypting inbound Egress encrypted emails and delivering them into individual and shared mailboxes, just like 'normal email'. In addition, the solution automatically encrypts any emails to an existing Egress customer, meaning users minimise the risk of leaking sensitive data and effectively comply with the wave of strict data privacy laws worldwide, including GDPR, CCPA and PDPA. This also helps you to stay clear of the resulting financial, legal and reputational costs.
