

Investigate 365

Understand how employees' email usage puts sensitive data at risk in your organisation.

Your organisation has never been at greater risk of an email data breach. Digital connectivity, on-demand cloud services, and remote working have resulted in employees accidentally and intentionally leaking data. Existing legacy tools have failed to mitigate this risk because they cannot detect and prevent these human-activated threats.

Investigate 365 analyses and quantifies your insider risk profile, so that you can understand the real threat of an email data breach in your organisation.

 **Quantify your risk**
Pinpoint human-activated risk as employees use email so you can target remedial action.

 **Keep your company data safe**
Your email data never leaves your environment during analysis.

 **Build a business case for security spend**
Analyse and understand risk so you can prioritise security technology budget.

 **No costs attached**
It's completely free to use Investigate 365.

Pinpoint and measure the risk of human-activated threats

Investigate 365 scans your email flows at the user-level to quantify and measure the risk of human-activated email breaches within your organisation.

We provide detailed analytics and reporting on:

- ✓ **Misdirected emails:** where sensitive content has been emailed to the wrong person
- ✓ **DLP violations:** where users have emailed sensitive data in the clear
- ✓ **Unverified TLS:** where emails containing sensitive content are at risk of malicious interception

Avoid regulatory breaches and financial loss

A new wave of global data privacy laws such as GDPR have put company wallets and reputations on the line for organisations that fail to comply. Email is the primary cause of data breaches, and organisations will only remain relevant in this highly regulated world if they are able to pinpoint and remediate email breach risk.

Investigate 365 is designed to put your business ahead of non-compliance by analysing human-activated email breaches, so that you can take decisive action to safeguard compliance, and protect your organisation from financial and reputational loss.

"I love it and could recommend it to anyone without any doubt."

CUSTOMER REVIEW VIA G2 CROWD

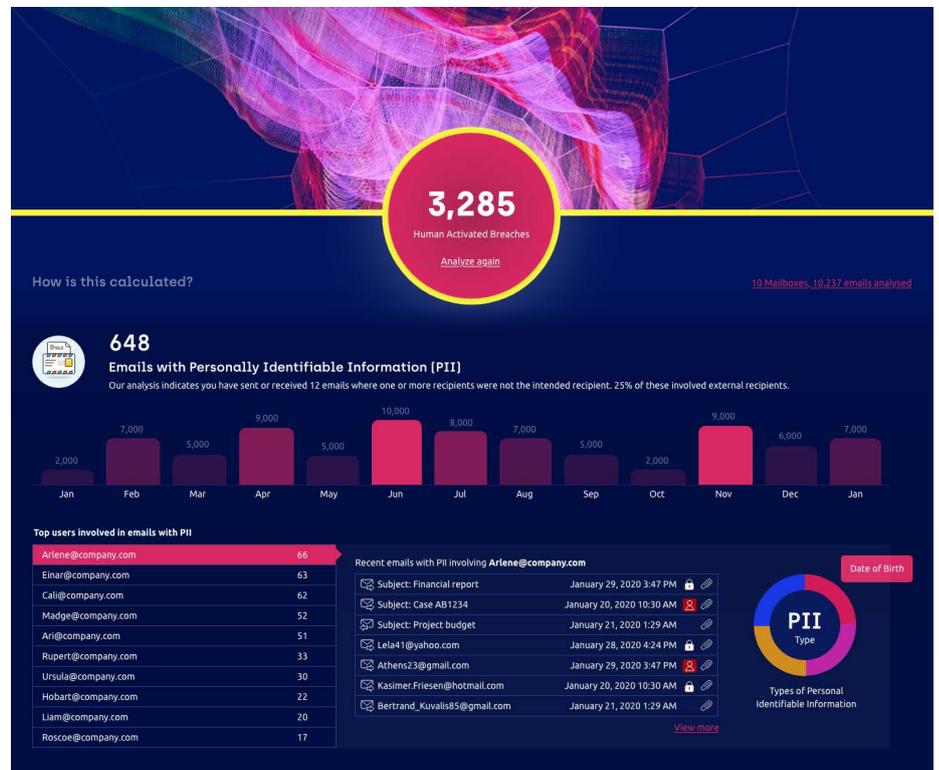

Top five features

- 1 Scans for misdirected emails
- 2 Checks for DLP violations in your email communications
- 3 Investigates emails shared with unverified TLS recipients
- 4 Results available in 24 hours
- 5 Runs on your Azure cloud with no data being sent back to Egress

Visit www.egress.com for more features.

Always stay in control of your data

Conducting a detailed analysis of your email security posture does not mean that you need to expose your company's information flows. Investigate 365 operates as a self-contained solution for Microsoft Office 365, running exclusively within your Azure cloud. Egress never has access to your organisation's email data at any time, meaning we safeguard your data privacy and keep sensitive data secure.

For more information please contact your account manager or call 0844 800 0172

About Egress

Our vision is for a connected world in which people communicate efficiently and securely. To achieve this, we provide human layer security to protect individual users and stop breaches before they happen.
