

Egress Secure Workspace

Easily and securely share confidential data both internally and with your supply chain.

Legacy approaches to managing and sharing data no longer work. Physical processes will only cause service delays and inefficiencies that frustrate customers and cost your organisation time and money

On top of that, a surge in shadow IT brought on by hybrid working has seen employees bypass complex security protocols in favour of free, less secure file sharing tools that put your sensitive data at risk.

Secure Workspace enables organisations to easily and securely share confidential data both internally and with your supply chain.

Keep sensitive data safe
Protect data with accredited security and enterprise-grade controls.

Collaborate faster
Accelerate critical work with a user-friendly UI and mobile integration.

Stop shadow IT
Remove the risk of employees resorting to free, insecure file sharing tools.

Protect IT bandwidth
An easy-to-use UI minimises unnecessary support requests, freeing up IT resource.

Simple and secure file sharing

The encrypted environment of Secure Workspace empowers employees to easily and securely share, store and work on documents. User permissions effectively control information flows and restrict both internal and external party access, such as read-only viewing.

Users can also fully revoke access to files when peers or partners no longer need access, while Anti-Virus scans protect against malicious threats. Multi-factor authentication delivers additional security for highly sensitive data.

Secure collaboration on the go

Using the Secure Workspace for Mobile app, employees can work productively and securely on the move by uploading, controlling and sharing documents, photos and videos directly from their mobile device - whether connected to a network or not.

As an extension to Secure Workspace, the app also enables users to review audit trails, revoke access to files and classify imagery. Multiple users can access the app on a shared device, reducing your hardware costs.

"Egress Secure Workspace's full audit capabilities enable us to see exactly what our partners are doing – from the documents they've accessed to when they accessed them."

HEAD OF TECHNICAL SOLUTIONS AND SECURITY, PEABODY GROUP

Top five features

- 1 Encryption in transit and at rest
- 2 Granular user permissions
- 3 Dedicated mobile app
- 4 Detailed audit logs
- 5 Data retention policies

Stay compliant with a feature-rich auditing toolkit

Secure Workspace empowers administrators to safeguard compliance. Dashboards offer an organisation-wide view of usage statistics, file activity, and volume metrics, while granular audit logs track the date and time of all user and administrator activities, including opens, location, sharing, editing, and downloads.

On top of that, administrators can set file retention policies that automatically delete files after a specified timeframe, meaning you avoid any regulatory pitfalls that might result in reputational damage, litigation, or even fines.

About Egress

Our mission is to eliminate the most complex cybersecurity challenge every organisation faces: insider risk. We understand that people get hacked, make mistakes, and break the rules. To prevent these human-activated breaches, we have built the only Human Layer Security platform that defends against inbound and outbound threats.
