

# Egress Respond

Run **internal investigations**, rapidly fulfil **Subject Access Requests**, and quantify **email risk**.

Organisations are under pressure to meet the requirements of a global wave of strict data privacy regulations. Legislation such as GDPR – and the financial penalties it threatens for non-compliance – give companies no option but to store and access email content securely.

Our eDiscovery solution gives you the ability to index, archive and instantly search plaintext and encrypted email content, meaning you can quickly analyse data flows and measure risk to:

## Meet regulatory requirements

Detect risk to personal data and comply with emerging global data privacy laws.

## Fast-track SAR response time

Streamline responses with automated and intelligent eDiscovery tools.

## Avoid financial and reputational damage

Prevent email data breaches that need to be reported to regulators and data subjects.

## Keep sensitive data safe

Protect personal information with a fine-grained view of sensitive data flows.

## Accelerate SAR fulfillment and compliance reporting

With regulations expecting quick fulfilment of Subject Access Requests (SARs), our rapid search capabilities across encrypted emails and files accelerate report generation and fast-track response time. In addition, intelligent optical character recognition technology makes keyword searches within images and scanned documents possible, while our redaction tool can obscure non-relevant sensitive data in just a few clicks before you send the report to the data subject.

We also report on email and document classification across your organisation, including automated document similarity reports, and enable you to also track classified data, including when documents have been edited, renamed or had a classification downgrade.

Securing  
**7 million**  
users every  
day

## Integrated access to personal archives with fast, comprehensive search

We enhance productivity by providing access to encrypted and plaintext emails from a single location via your web browser. Users can access their personal archives, while administrators can monitor the entire email network using rapid search and inspection of email body and attachments, and subject lines. Reporting provides in-depth analysis of how employees are securing sensitive data, allowing for targeted improvements to reduce risk. Our powerful analytics engine also provides real-time detailed information for drilled-down monitoring and investigations.

**"We decided to use Egress Respond to help monitor and manage our compliance with both data protection law and industry best practice."**

GENERAL MANAGER, HEALTHCARE RM

## Top five features

- 1 Rapid search functionality
- 2 Encrypted and plaintext index
- 3 Redaction capabilities
- 4 Data search restrictions
- 5 Character recognition

Visit [www.egress.com](http://www.egress.com) for more features.

## Flexible infrastructure for bespoke archiving and data protection

Infrastructural complexity can often block effective archiving efforts. We are platform and provider-agnostic, with full cloud, on-premise and hybrid implementations available. We are highly flexible, including automatic storage of highly sensitive email content on-premise, while providing cloud storage for less sensitive data. We also integrate with Outlook so users can access their personal archives directly from their desktop, with automated system triggers and report generation to further aid customisation and integration.
