Egress Intelligent Email Security
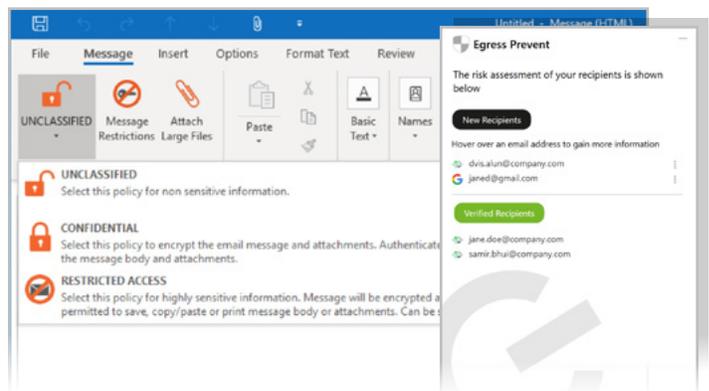

Human layer security that uses contextual machine learning to **prevent breaches**, **protect data** and **measure risk**.

Most email protection solutions still rely on a one-size-fits-all approach that doesn't consider the real-world risks of a data breach as information travels over untrusted networks to potentially untrusted recipients.

We prevent human-activated data breaches so organizations can meet compliance requirements and drive business productivity. Our Intelligent Email Security platform uses powerful contextual machine learning technology to empower employees to use email securely and enables organizations to:

✓ Prevent security breaches
Send the right sensitive information to the right recipient(s).

✓ Meet regulatory requirements
Protect data to stay on the right side of emerging global data privacy laws.

✓ Keep sensitive data safe
Apply the appropriate level of security to sensitive email content.

✓ Avoid financial and reputation damage
Investigate risk in your corporate email network to ensure ongoing compliance with regulations.

Delivering end-to-end email security

Our Intelligent Email Security platform uses contextual machine learning to detect abnormal behavior, prevent data breaches, and dynamically apply the right level of security to every email. Our platform has three key modules:

- **Egress Prevent** for sending the right content to the right recipient(s)
- **Egress Protect** for appropriately securing email content, including large files
- **Egress Investigate** for measuring the risk of a breach and demonstrating compliance

Securing **1,000+** large organizations

Empowering users by balancing security and usability

Our human layer security starts with contextual machine learning that prevents emails going to the wrong people or with the wrong content, including attachments.

We then dynamically apply the appropriate level of security based on the risk of a breach, including message-level encryption and TLS. In addition, our Smart Authentication technology streamlines the recipient experience by using machine learning to establish trust using domain, location and system information and, if reliable, seamlessly authenticate access.

"Without Egress, we would have had to buy at least five different systems to meet our information sharing requirements."

**HEAD OF INFORMATION GOVERNANCE AND SECURITY, HCA HEALTHCARE**

Top five features

1 Contextual machine learning

2 Automated email protection

3 Smart Authentication to reduce recipient friction

4 Fine-grained data analytics

5 Full mobile support

Intelligent analytics for improved security and compliance

We use fine-grained analytics to build an organization-wide risk profile, so you can pinpoint new and targeted security policies. Our detailed analytics and reporting across all email communications empower administrators to effectively measure the risk of a breach. We also provide powerful search tools to investigate compliance with data privacy regulations and quickly fulfill Data Subject Access Requests.
