

# Pinpoint and remediate email risk with Egress Analytics

Use **granular reporting and analytics** to spot threats, stay compliant and demonstrate ROI

Human-activated threats are now the number one cause of email security incidents. Egress Prevent minimises insider risk with machine learning that flags risk in real-time and empowers users to fix potential incidents before they can even happen.

As part of our offering, we also provide administrators with detailed analytics that track how users are responding to the tool's advice across multiple scenarios, meaning your organisation can rapidly identify any risk across email flows and remain compliant with data privacy legislation.

 **Get ahead of email risk**  
Pinpoint risk faster with rapid analytics and reporting.

 **Accelerate decision making**  
Take critical security decisions faster.

 **Realise ROI**  
Demonstrate security posture gains through Egress investments.

 **Protect brand equity**  
Stay compliant and avoid reputational and financial harm.

## Comprehensive reporting that safeguards compliance

Egress Prevent's reporting allows you to quickly pinpoint compliance risk across email flows in a matter of clicks. You can access dashboards and comprehensive analytics across multiple scenarios of risk, including: misdirected emails; display name impersonations; insecure domains; large recipient lists (where the use of BCC might be necessary); multi-domains (when there are more than the recommended number of external domains); as well as new, and even misspelled, aliases.

Securing  
**7 million**  
users every  
day

## In-depth analysis of multiple scenarios

Detailed analytics for each of these scenarios reveals the level of advice accepted vs. rejected, users who are flagging risk most frequently, as well as a timeline of events. We also provide an extensive list of most recent emails, detailing when the email was sent, the sender and their recipients, those recipients which flagged advice, and whether the advice was accepted or rejected. This enables you to identify areas of email risk across your organisation and, in turn, put remediating plans in place.

"... a very easy to use application, fast and with great precision, that is why we consider it one of the best of its kind today!"

CUSTOMER REVIEW VIA G2

## Granular user analytics that mitigate human error

Our reporting also allows administrators to drill down to the user level and investigate how employees are responding to the real-time advice issued by our contextual machine learning. As well as revealing whether users are accepting or rejecting advice, the platform offers intelligence into when those emails were sent, the recipients involved, and the type of scenario, meaning you can effectively pinpoint at-risk employees who may require additional support and take mitigating steps.

## Top five features

- 1 Easy-to-digest dashboards
- 2 Multiple scenarios tracked
- 3 In-depth risk analytics
- 4 Prevent advice reporting
- 5 Granular user profiles
