

Egress Intelligent Email Security for banks and credit unions

Human layer security that uses contextual machine learning to ensure emails and statements are sent to the right recipients and **sensitive data is encrypted**.

Every day, employees at banks and credit unions share sensitive client data and proprietary information via email. Compliance regulations and security policy mandate this data is protected from unauthorized access at all times, including when in transit and at rest within mailboxes.

Our Intelligent Email Security platform uses powerful contextual machine learning to ensure emails are delivered to the correct recipient with the right level of security applied.

 **Prevent security breaches**
Send the right sensitive information to the right recipient(s).

 **Meet regulatory requirements**
Protect data to stay on the right side of global data privacy laws.

 **Keep sensitive data safe**
Apply the appropriate level of security to sensitive email content and securely receive application information.

 **Avoid financial and reputation damage**
Investigate risk in your corporate email network to ensure ongoing compliance with regulations.

Delivering end-to-end email security

Our Intelligent Email Security platform uses contextual machine learning to detect abnormal behavior, prevent data breaches, and dynamically apply the right level of security to every email. Our platform has three key modules:

- **Egress Prevent** for sending the right content to the right recipient(s)
- **Egress Protect** for appropriately securing email content, including large files
- **Egress Investigate** for measuring the risk of a breach and demonstrating compliance

Securing
1,000+
large organizations

Security technology that's easy for employees and members to use

Our human layer security starts with contextual machine learning that prevents emails going to the wrong people or with the wrong content, including attachments.

We then dynamically apply the appropriate level of security based on the risk of a breach, including message-level encryption and TLS. In addition, our Smart Authentication technology streamlines the recipient experience by using machine learning to establish trust using domain, location and system information and, if reliable, seamlessly authenticate access.

"We selected Egress to dynamically enforce our DLP policy as employees use email, preventing unauthorized access."

HEAD OF INFORMATION GOVERNANCE AND SECURITY, GLOBAL BANK

Intelligent analytics for improved security and compliance

We use fine-grained analytics to build an organization-wide risk profile, so you can pinpoint new and targeted security policies. Our detailed analytics and reporting across all email communications empower administrators to effectively measure the risk of a breach. We also provide powerful search tools to investigate compliance with data privacy regulations and quickly fulfill Data Subject Access Requests.

Top five features

- 1 Contextual machine learning
- 2 Automated email protection
- 3 Secure end-to-end application process
- 4 Smart Authentication to reduce recipient friction
- 5 Full mobile support
