

Emergency response and Secure Workspace for Mobile

Capture and share **sensitive media on the go** to accelerate file sharing and minimise response times.

Collaboration on the go

At the onset of an emergency, response times can be a matter of saving lives. As a result, the traditional ways of gathering sensitive media out in the field, then returning to upload and share that data, become wholly inefficient and potentially put lives at risk. When under pressure to rapidly respond to time-critical incidents, you need a faster – yet secure – solution.

Secure Workspace for Mobile is an app that enables users to take and securely upload sensitive media to Secure Workspace wherever they are, helping organisations to:

Fast-track the file-sharing process

Stay productive when out in the field and respond to real-time needs.

Minimise the threat of a breach

Use secure permissions and controls to prevent the exposure of sensitive media.

Keep costs down

Dramatically cut hardware costs by reducing the number of required devices.

Boost workflow productivity

Minimise time spent uploading media when back at your desk.

Rapid and secure file sharing on the go

The app allows emergency responders to capture and instantly upload images and videos to Secure Workspace in real time when connected to a network. If there's no WIFI or mobile coverage available, the app's offline mode simply moves all media into a queue to automatically sync with Secure Workspace as soon as network connectivity is restored.

This completely removes all the wasted time that teams would normally spend manually uploading footage when back at their desks.

Keeping costs down with shared device functionality

The reality of public sector budgets means that emergency response units face never-ending pressures to cut costs wherever possible. Secure Workspace for Mobile has been specifically programmed so that multiple responders can access the app with their own unique credentials via a shared device.

This eliminates the need for one device per team member, meaning you can limit the number of devices that your team uses and, importantly, significantly remove hardware costs from the balance sheet.

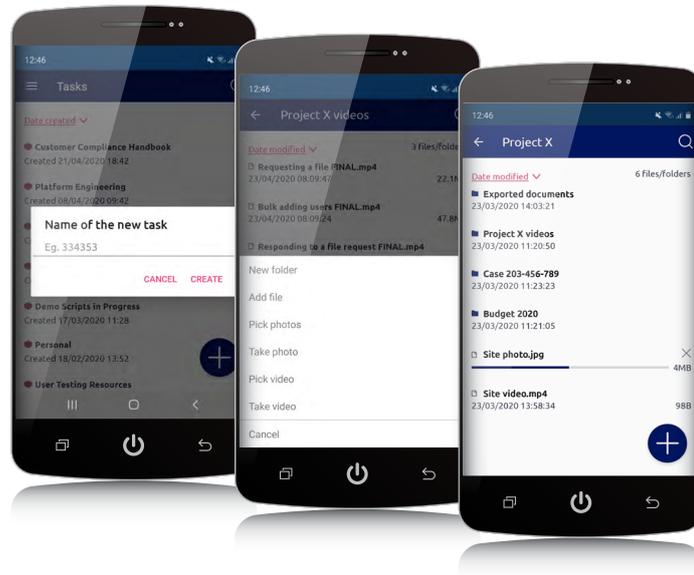

"Honestly, the product has been a victim of its own success! Our IT business partners are constantly getting other teams within the business asking them when they can use Secure Workspace."

HEAD OF TECHNICAL SOLUTIONS AND SECURITY, THE PEABODY GROUP

Seamless integration with Secure Workspace for added security

The app integrates with Secure Workspace so that accredited security frameworks keep your data safe. There's a robust audit trail for uploaded media, while expiry, deletion and recall options keep you firmly in control so that, in the event of a breach, you can limit any financial penalty by evidencing preventative actions.

In addition, responders can bypass their device's camera roll by capturing and sharing media directly to Secure Workspace from within the app, meaning they avoid exposing sensitive content on their device.

Top five features

- 1 Secure and instant uploads to Secure Workspace
- 2 Offline queuing mode
- 3 Shared device user access
- 4 Media capture and sharing within app
- 5 iOS and Android supported
